PROFESSIONAL SUMMARY

Software Engineer with experience in software product development, backend application development, REST API development, and full-stack application engineering. Proficient in Python and Java, with experience building application workflows, integrating relational and NoSQL databases, developing NLP-based applications, and deploying cloud-based solutions using AWS. Skilled in FastAPI, React, MySQL, and MongoDB, with a strong foundation in object-oriented programming, data structures, algorithms, debugging, and software development practices. Interested in developing reliable, scalable, and high-performance software systems.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript

Backend Development: FastAPI, REST APIs, API Development, Backend Application Development

Frontend Development: React, JavaScript

Databases: MySQL, MongoDB, Supabase

Cloud Platforms: AWS, AWS EC2, Google Cloud Platform (GCP)

Software Engineering: Object-Oriented Programming, Data Structures and Algorithms, Debugging, Application Troubleshooting, Version Control, Software Development

Frameworks and Libraries: TensorFlow, PyTorch, Scikit-learn, Hugging Face Transformers, OpenCV, NLTK, spaCy

Development Tools: Git, GitLab, Google Colab

PROFESSIONAL EXPERIENCE

Associate Software Engineer – LoginRadius March 2026 – Present
Software Engineering *India*

- Contribute to software product development and enhancements, supporting application functionality, product improvements, and user experience.
- Collaborate with engineering teams to develop and improve product capabilities within an established software development environment.
- Support software issue analysis, debugging, and troubleshooting to maintain application reliability and functionality.
- Participate in development workflows involving version control, code maintenance, and software engineering best practices.

AI Developer (Freelancer) – Kautilya AI November 2025 – January 2026
AI Automation Development *Remote*

- Developed automation workflows for lead-generation processes, reducing repetitive manual operational tasks.
- Implemented automation workflows for Snapchat and Google Ads to streamline advertising-related processes.
- Translated operational requirements into functional automation workflows and supported their implementation.
- Automated recurring marketing and lead-generation activities to improve operational efficiency.

AI/ML Intern – BYOL Academy September 2025 – January 2026
Artificial Intelligence and Machine Learning *Remote*

- Contributed to machine learning model development, testing, integration, and deployment for real-time AI/ML projects.
- Developed an AI-based Humanizer Model to transform AI-generated content into more natural and human-like language using NLP techniques.
- Built and integrated ML processing pipelines supporting model inference and production use.
- Contributed to model performance optimization and deployment on AWS.
- Applied Python and machine learning techniques to develop practical AI solutions.

Research Intern – Speech Lab, IIIT Hyderabad July 2023 – February 2024
Natural Language Processing Research *Hyderabad, India*

- Conducted research involving speech and text processing using TED Talks and complex presentation datasets.
- Implemented sentence tokenization and text preprocessing techniques for NLP research workflows.
- Prepared and processed speech and text datasets for downstream natural language analysis.
- Supported research activities involving natural language and speech-processing techniques.

PROJECTS

Learning Hub – Full-Stack Web Application *React, MongoDB*

- Developed a full-stack web application for discovering and applying to educational programs.
- Implemented dynamic filtering based on category, duration, and start date to improve program discovery.
- Built an application submission workflow for collecting applicant information and automating confirmation emails.
- Developed a counselor review workflow supporting application approval or denial with decision reasons.

AI Humanizer – NLP-Based Text Transformation *Python, Hugging Face, AWS EC2*

- Developed an NLP-based model to transform AI-generated text into more natural and human-like language.
- Designed an end-to-end text-processing and model-inference pipeline for automated content transformation.
- Utilized Hugging Face Transformers and NLP techniques to support text processing and model execution.
- Deployed the model on AWS EC2 to support cloud-based model execution and inference.

EDUCATION

International Institute of Information Technology, Hyderabad 2024 – 2026
Master of Science in Data Science *CGPA: 8.8*
Hyderabad Institute of Technology and Management 2020 – 2024
Bachelor of Technology in Computer Science and Engineering *CGPA: 7.26*
Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Convolutional Neural Networks.

PATENTS

Violence Detection – Patent Application No. 202341029626

- Developed an improved AI/ML approach for detecting percentages of violence and non-violence from real-time CCTV monitoring.

PUBLICATIONS

- Automated Bot Detection on Twitter Using URL Patterns and Learning Automata – International Journal of Engineering Technology & Management Sciences, Vol. 8, Issue 3, 2024.
- Speaking Hands: Advancing Communication with Gesture Recognition Systems – International Conference on Computational Intelligence and Communication Networks (ICCICN-24).

CERTIFICATIONS

- Google – Cloud Agentic AI, 2025.
- Microsoft – Foundation Course on Generative AI, 2023.
- NPTEL – Cloud Computing, 2023.
- VCET – Workshop on Parallel Programming using OpenMP and CUDA, 2023.
